Start taping at the top!

Bend down and in as you apply the tape

To assemble the model.

Glue print outs to light cardboard

Cutout the hull panels- stay outside the lines!

Use masking tape on the inside to join the panels.

Line up the "arrows" of each panel with the

matching arrow of the other panel.

Start by taping the bottom and lower side panel

together at the arrows, and go in either direction as

you pull the edges together to where they are

touching. Then apply the masking tape.

Tape to the ends of the matching panels, and

then do the same with the other panels.

Add the bow and transverse panels last, and

tape them to the side panels starting at the top

and working down. Use "clear tape" on the

outside to let the hull color show through.
